

RIBUS Statement on Arsenic in Rice

RIBUS is aware of the media attention around arsenic in food and is actively monitoring the situation, participating with industry trade organizations and ensuring RIBUS ingredients comply with international laws on arsenic levels.

As the leading US-based global rice ingredient supplier (from bran and hulls), we have put in place rigorous testing because our top requirement and priority is food safety for our customers and end consumers.

RIBUS is:

1. Actively involved with industry (*US Rice Federation, Organic Trade Association, Organic Rice Working Group*) and working cooperatively with the Food and Drug Administration (FDA) to gain / provide scientific information on the issue of arsenic in foods.
2. Testing each lot of each product we produce (Nu-BAKE[®], Nu-RICE[®], Nu-FLOW[®], Nu-FLAC[®]) to gather data on the arsenic levels in addition to the standard tests we conduct (proximate, microbial, heavy metals and toxins).

While there may be concern by some, RIBUS encourages consumers and processors to:

1. Review the [FDA information](#) that states, “Based on the currently available data and scientific literature the FDA does not have an adequate scientific basis to recommend changes by consumers regarding their consumption of rice and rice products.”
2. Review the US Rice Federation [“Arsenic Facts”](#) or information on [US Grown Rice](#).
3. Review the Organic Trade Association information on [arsenic](#) in foods.
4. Be aware that RIBUS’ ingredients are used at very low levels (typically below 1%) in foods and dietary supplements.

Should you have any questions or concerns, please contact RIBUS at info@ribus.com or 314-727-4287.
